

Post Insulator Blade Adaptor

After a damaged insulator arm dropped a transmission line, Sunflower Electric in Great Bend, KS needed to avoid the huge cost of future drops. They turned to Pelco Products, Inc. for a solution. Our engineering team designed and built the all new Post Insulator Blade Adaptor.

Instead of the costly, labor-intensive process of replacing the entire post insulator, simply clamp the stainless steel adaptor over the damaged aluminum blade. The threaded body (with anti-seize lubricant) is secured by two 2-3/4" long stainless steel bolts, utilizing Belleville washers for a solid mounting system. The entire process takes less than five minutes, and can be done by one person. The Post Insulator Blade Adaptor is durable, easy to install and saves thousands of dollars.

Features:

- Easy to install, no special tools needed
- Stronger, more secure power line mounting
- Avoid costly line drops and post insulator replacement
- Stainless steel construction is resistant to damage from wear, corrosion and vandalism

Available in single mount (SP-6201) or double mount (SP-6202) models.

Visual evidence of steel-against- aluminum damage

Remove the yoke and see the extent of the wear

Place the new Post Insulator Adaptor over the damaged blade

Easy, one man installation with standard tools

Reattach the line in less than 5 minutes

Eliminate the cost of dropped lines or post insulator replacement

#SP-6201 Single Mount
#SP-6202 Double Mount
(Patent Pending)

Stop wasting time searching for utility hardware and replacement parts. Make just one call to Pelco Products, Inc. for brackets, mounts, poles, bases, clamps, anchors and much more. **We have what you need.**
