Pelco Products, Inc. Announces Its Newest Product, The Astro-Brac Galaxy

Pelco Products, Inc. announces its newest product in the Astro-Brac line, the Galaxy. This new and improved addition to Pelco's flagship product, the Astro-Brac, offers the industry's leading holding power for securing traffic products to traffic poles and mast arms.

"The original Astro-Brac was created in 1968, and through the years, we've found ways to improve and adapt the product to fit more needs. With the Astro-Brac Galaxy, we've created a clamp that can secure traffic accessories with greater clamping force than we've ever had. This means safer commuting for everyone!" says Steve Parduhn, President/CEO of Pelco Products.

The Astro-Brac family is comprised of a series of clamps that are made to hold traffic accessories like signals, cameras, signs, antennas and sensors to poles and mast arms. The Galaxy, named in the astronomical theme as many of the other products in the Astro-Brac line, is the latest and greatest of these brackets that are out of this world!

"The Astro-Brac family has always been the star product in the bracket industry, and the Galaxy has greatly improved the functionality and installation process since there is no order of installation. This feature greatly reduces the chance of an incorrect installation," added Parduhn.

"Faster installation time, reduced installation issues, versatility of applications make this product one of Pelco's greatest inventions. We're very excited about the opportunities this product will give our customers for versatile, easy and affordable traffic hardware," finished Parduhn.
