

## Pelco's Sign Making Capabilities

The HP Latex printer has the capability of printing full color graphic images.

### New Sign Process to Save Time and Money

Pelco's new capabilities of sign making allow us to manufacture various signs meeting Federal MUTCD specifications. Now with in-house printing, cutting, and laminating, we can reduce cost, reduce lead time, and provide a superior extended-life product.

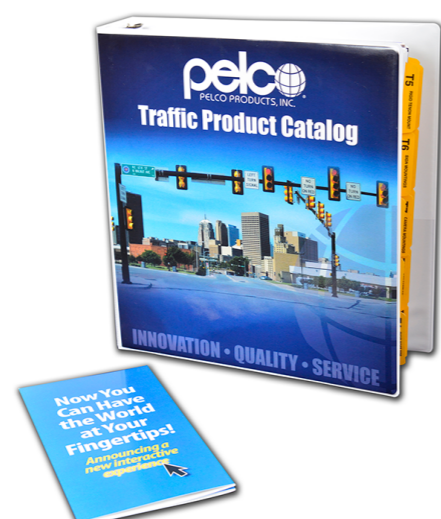

The Graphtec cutter works with adhesive backed vinyl and electrocut film, as well as engineering grade and diamond grade reflective vinyl.

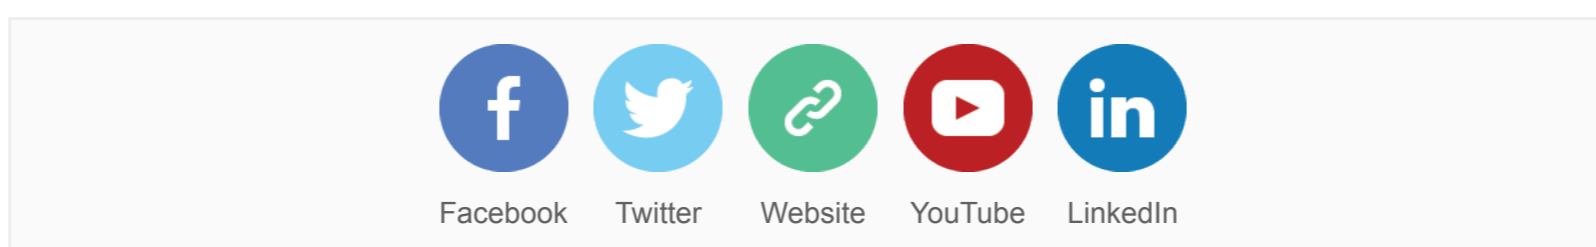

#### Features and Benefits

- New process is less expensive
- Higher quality product
- Printed with Latex ink
- Covered with protective film to reduce fading
- Film protects from minor scratches
- No extra fees for protective film
- Reduced lead times

Reflective pedestrian signs will be our initial printed product, but with high-tech materials and new production methods we will be able to expand our capabilities and provide additional options to our customers.
